

FIGURE 1 “Solving the Epilepsies”—better diagnosis, treatments and end of stigma is the epiXchange-proposed Epilepsy mission, for example, for the 9th Framework Programme Horizon Europe. The goal will be to reduce the time to the correct and accurate diagnosis to less than 1 year by 2025, to present the first disease-modifying treatment in clinic by 2030, to have 80% of persons with epilepsy seizure-free by 2030, to have equal quality of life for persons with epilepsy by 2030, and to stop the epilepsy-related stigma by 2028. To achieve the goals of the Epilepsy Mission, there is a need to facilitate the dialogue between patients/families, clinicians, researchers, health care providers, educators, and the pharmaceutical industry. In parallel, to engage stakeholders in various sectors of society to interdisciplinary actions, including medical and information technology (IT) or technology sectors; small and medium-sized enterprises (SMEs), multinational enterprises (MNEs), and industry; designer sector for consumer goods and medical devices. The research and innovation projects are summarized in blue circles and described in detail in the text
